Projects

GoNext

is a IT career pathway navigator that extract skills from a user's resume and job market data to recommend upskilling pathways and IT role transitions suitability, the system uses skill gap analysis, AI replaceability score, salary progression, confidence score and data freshness indicators to determine recommendations

Educatorio

is a Learning Management System web app for schools and training teams that wants one place to run courses, track learners and stay in touch, with a goal to make it easier for an organization to offer courses, enroll students, run classes (including assignments and submissions), and communicate without juggling many separate tools

ft_webserv

is a 3 person group project about developing a web server engine (such as Nginx/Apache) from scratch using C++ and HTML, the main point is to learn details of basic frontend backend communication.

ft_inception

software deployment is a important part of the tech industry, ft_inception requires setting up a virtual machine to host a virtual container platform that deploys software services, main point is to learn the concept of one for all software deployment solution
